

Technical Resources

Business Smart is a leading provider of CAD/CAM technical talent to the engineering design and manufacturing industries. Started in 2003, Business Smart was founded by Paul Creteau with a management team of professionals who have over thirty years experience in the CAD/CAM business beginning with early drafting programs in the 1970's. Some have spent almost two decades working for Dassault Systemes, one of the largest providers of engineering design and manufacturing software. With extensive hands-on experience at hundreds of businesses, we have first hand knowledge of the skills required to assist an organization in meeting its goals and objectives.

Our purpose is to provide the highest quality engineering software support and technical professionals. From our inception, we have specialized in providing the most innovative and creative individuals to support the CAD/CAM arena. Today this objective continues to be our principal focus and the foundation for our success.

From our many years experience in CAD/CAM technical support, education and consulting we have a proven track record of success. Currently, we have direct relationships with approximately 1,000 experienced engineers and management professionals in North America, Europe, and Asia.

For this reason, our clients keep looking to us for high quality employees in their hardest-to-fill positions. Challenge us with your requirements.

We offer both direct placement for CAD/CAM professional talent and contract services for the design, manufacturing, IT and technical support areas. Our professional technical resources have years of experience in the aerospace, automotive, consumer goods and marine industries. Contract services are an excellent opportunity for customers to augment their current staff with highly experienced technical resources. This is a particularly cost-effective means of providing on site support for special projects or during business upswings.

Contractors and Employees for Hire

- 90% have Engineering or IT degrees
- 30% have Graduate degrees
- 85% have at least 3 years industry experience:
 - Aerospace
 - Automotive
 - Consumer Goods

Majority are Canadian Citizens
with required work visa

Supported Applications

- Dassault Systemes Products
 - CATIA V4 & V5
 - Support of all Products & Levels
 - Enovia
 - Matrix One
 - Smart Team
 - VPLM
 - Delmia
 - SolidWorks
- Unigraphics
 - Mechanical CAD & CAM (including NX)
 - Team Center
- Pro Engineer
 - Pro Engineer
 - Wind Chill

Additional Product Areas

- SAP
- Metaphase
- AutoCAD

Support Languages

Support can be provided in:
